

PC-800 Model 2... output, the measure of productivity

Once verified, the job disk becomes an environmentally secure database immune to the problems of hand-taped artwork, such as peeling, abrasion, and dimensional creeping. It can be stored and updated at any time with no loss in registration accuracy. That common database can be used to generate artwork masters, pad masters, solder masks, silkscreen masters, assembly drawings, and optional documentation. The results are dependable accuracy and consistency, from designer's concept to finished board.

Artwork Masters. PCB layouts can be digitized any size and the artwork generated will be 1 to 1. The need for costly photo-reductions is eliminated.

Solder Masks. The solder mask is generated from the same database as the artwork master. This improves the manufacturability of the board and reduces external charges.

Silkscreen Masters. The component layout and reference designators that are commonly created as part of the symbols can be extracted to generate a silkscreen master. Additional text can be added through the print function of the Digitize/Edit program.

Pad Masters. The pad master is generated from the same database as the artwork master and is used to create a drill pattern.

Assembly Drawings. To aid in bread-boarding prototypes or hand-insertion of components, assembly drawings can be generated from the same database as the original design.

Support Documentation. The Component Manager program allows a description to be placed on each symbol with a reference designator. From the description, it is possible to extract fields of information for various reports to complete the PC package, for example, parts lists or bills of material.

Drill Tapes. Automatic insertion equipment requires precise drill holes board-to-board. Drill tapes produced by the system provide consistently precise registration.

Drill Drawings. Drill drawings with user-defined symbols representing relative holes sizes on the PC board can be generated from the same database as the artwork master with the Drill Drawing Program.

PC-800 Model 2... flexible configurations

The PC-800 Model 2 is capable of operating at speeds and accuracies far beyond human capabilities, producing dramatic improvements in productivity, turnaround time and product quality. To enhance the most productive, cost-effective system on the market today users can select from a wide variety of dependable hardware and software performance packages.

GSI Photoplotters

All PC-800 Model 2 configurations will support the following GSI photoplotters depending on the requirements of the user.

GSI Model 41 Photoplotter

- Most popular PCB plotter
- Active plotting area 16" x 20" (406 x 508 mm)
- Overall accuracy $\pm 0.001"$ (± 0.025 mm)
- Two mil minimum line width

GSI Model 42F Photoplotter

- High-speed, large area plotter
- Active plotting area 36" x 48" (.91 x 1.22 m)
- Maximum speed 42"/second (1.067 m/second)

- Overall accuracy $\pm 0.004"$ (± 0.10 mm) $\pm 0.0025"$ over 12" x 12" area

GSI Model 32B Photoplotter

- Precise, large area plotter
- Active plotting area 48" x 60" (1.22 x 1.52 m)
- Overall accuracy $\pm 0.0008"$ (± 0.020 mm)

GSI Model 33B Photoplotter

- Ultra-precise, mid-size plotter
- Active plotting area 25" x 30" (536 x 762 mm)
- Overall accuracy $\pm 0.0005"$ (± 0.013 mm)

GSI Optional Hardware

To enhance the performance and extend the capabilities of the PC-800 Model 2 system, a variety of proven hardware options are available.

GSI Model 8030 Printer

- Dot-matrix print head
- Bidirectional up to 180 characters/second
- Maximum line length 132 characters at 10 characters/inch (25.4 mm)
- Three print densities

GSI Model 8080 Magnetic Tape Unit

- 800 BPI (1600 BPI Model 8081)
- Accepts 10-1/2" IBM-compatible 9-track tapes
- Produces plot tapes, N/C drill tape and Data Base Language output

GSI Model 8088 Drill Tape Unit

- Includes perforated tape punch and reader
- Produces 8-channel perforated tapes
- Punch speed to 75 characters/second
- Read speed to 400 characters/second
- Produces N/C drill tapes or reads tape data

GSI Model 8045 Data Entry Keypad and Display

A Data Entry Keypad and Display is included as part of the basic system configuration. A second unit is available as an option to allow

the operator to input data and commands from both the digitizer and console.

GSI Model 8390 Communications Interface

The RS-232-C Communications Interface provides for the transmission of data between the PC-800 Model 2 and a host computer. It is also used as the communications link between Model 2 and various peripherals including plotters and other computing systems.

GSI Model 8060 Check Plotter Interface

The Check Plotter Interface provides for the use of the Hewlett-Packard Model 7580A drafting plotter for production of at-width check plots and drill tape verification drawings (with optional drill tape package).

GSI Optional Software

Software supplied with the PC-800 Model 2 includes Digitize/Edit for data entry onto the job disk; Symbol Librarian for storing symbols; Component Manager for producing support documentation; Plot/Verify for transferring data to the output devices; and Plot-At-Width for generating scales plots to check spacing. Nearly all system configurations support the following software options.

GSI Model 8856 Data Base Language Program

The Data Base Language Program allows the operator to retrieve graphics information from the database and transcribe it onto mag-

netic tape, transmit it to another computing system via the RS-232-C interface, or make a hardcopy using the GSI Printer.

GSI Model 8852 Tape Plot Program

The Tape Plot Program allows the operator to photoplot data which was not produced on the PC-800 Model 2, provided the system is configured with a photoplotter and magnetic tape or perforated tape unit.

***Drill Drawing Program**

The Drill Drawing Program includes software for generating a drill drawing with the user defined symbols. The data may then be transferred to tape or directly on-line to a photoplotter.

***Drill Tape Program**

The Drill Tape Program contains the software for preparing N/C drill machine tapes. To utilize this software option, the system must be configured with a magnetic tape or drill tape unit.

*Supplied with Models 8080, 8081 or 8088.
