 StefanL38, The last code does not look any better. Maybe it is because I do not have the SPIN application on my c

 in the menu there is a button "code"

 ifd you click on this button the html-command "[code] is written into the textfield

the code button has now a "*" at the end to show that you click the code-button ONCE

insert your code and click onto the code-button again

now the html-command "[/code]is inserted

demo how insert code			
<pre>PUB BEATStart(led): Success {{Start new blinking process in new cog; return True if successful.}}</pre>			
<pre>Stop Success := (Cog := cognew(Heartbeat(led), @Stack) + 1)</pre>			

for long codefiles i recommend to use the archive-function of the proptool

Propeller Tool - HumanInterface_v1.4					
File Edit Run Help					
New	Ctrl+N	74HC597			
Open	Ctrl+O				
Open From	+	0.0			
Save	Ctrl+S	CamStat, i			
Save As		erCog,NumCog,GrC			
Save To	+	it			
Save All	Ctrl+Alt+S				
Close	Alt+Q	ta			
Close All					
Select Top Object File	Ctrl+T				
Archive	Þ	Project			

set the focus to the top-objectfile of your project and click archive then ALL files related to this object will be compressed in on zipfile

then use the attachment-manager of the reply-post-site
