1. General Specifications

TM240320C1NFWGWC is a color active matrix LCD module incorporating amorphous silicon TFT (Thin Film Transistor). It is composed of a color TFT-LCD panel, driver IC, FPC and a back light unit. The 2.4" display area contains 240 x 320 pixels and can display up to 65K colors. This product accords with RoHS environmental criterion.

Item	Contents	Unit	Note
LCD Type	TFT	-	
Display Color	65K		1
LCD Duty	1/320	-	
Viewing Direction	6:00	O'Clock	
Active Area(W×H)	36.72×48.96	mm	
Number of Dots	240(RGB)×320	mm	
Dot Pitch(W×H)	0.153X0.153	mm	
Controller	ILI9325		
V _{DD}	2.8V	V	
V_{DDIO}	1.8V	V	
Outline Dimensions	Refer to outline drawing on next page		
Backlight	3-LEDs(white)	-	
Weight	TBD	g	
Interface	8080-8/16bit	-	
Polarizer Mode	Transmissive/Positive	_	

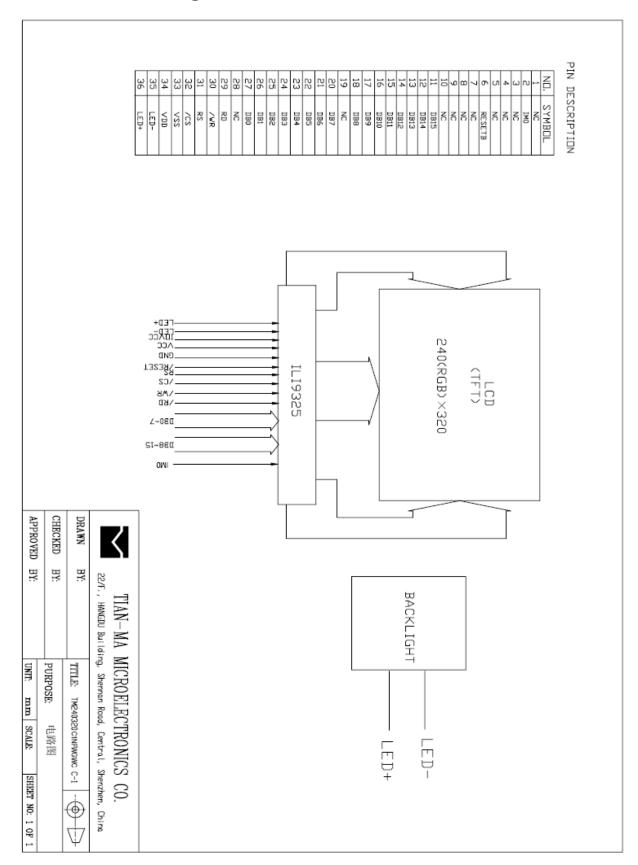

Note 1: Color tune is slightly changed by temperature and driving voltage.

2. Outline Drawing

3. Circuit Block Diagram

4. Absolute Maximum Ratings(Ta=25℃)

Item	Symbol	Min.	Max.	Unit	Note
Power Supply Voltage	V_{DD}	-0.3	3.3	V	
Logic Signal Input /Output Voltage	V _{IOVCC}	-0.3	V _{DD} +0.3	V	
Operating Temperature	Тор	-20	+70	$^{\circ}$	1, 2
Storage Temperature	Tst	-30	+80	$^{\circ}$ C	

Notes:

- If the module is above these absolute maximum ratings. It may become permanently damaged.
 Using the module within the following electrical characteristic conditions are also exceeded,
 the module will malfunction and cause poor reliability.
- 2. $V_{\text{DD}} > V_{\text{SS}}$ must be maintained.

5. Electrical Specifications and Instruction Code

5.1 Electrical characteristics(Vss=0V ,Ta=25℃)

Parameter		Symbol	Condition	Min	Тур	Max	Unit	Note
Input	'H'	V _{IH}	V _{DD} =2.8V	0.8V _{DD}	-	V_{DD}	٧	
voltage	'L'	V _{IL}	V _{DD} =2.8V	Vss	-	0.2V _{DD}	٧	
Output	'H'	V _{OH}	-	0.8V _{DD}	-	V_{DD}	٧	
Voltage	'L'	V _{OL}	-	Vss	-	0.2V _{DD}	٧	
Current		I _{CC1}	Normal mode	-	25	-	mA	1,3
Consump	tion	I _{CC2}	Standby mode	-	-	-	mA	2

Note:

- 1: Display full white. Backlight on state.
- 2: IC on standby mode.
- 3: the default voltage is 3.3V, for 3 lights in series, the power is that the current multiply 3.

5.2 LED backlight specification(Vss=0V ,Ta=25°C)

Ite	Item		Condition	Min	Тур	Max	Unit	Note
Supply	voltage	-	-	2.5	2.8	3.3	V	
Supply	current	l _f	V _f =9.6V	-	20		mA	
Reverse	e voltage	Vr	-	-	-	-	V	
Forward	Normal	I _{pn} 3-chip			20	-	A	
current	Dimming	I pd	Serial				mA	
Reverse	Current	I _r	-	-	-	-	μΑ	
Unifo	ormity	∆Bp		80%				
Color or	Color coordinate*		I _f =20mA	0.26	-	0.31	-	
Color co	orumate	Y		0.26	-	0.31	-

Viewing	θ1 (Φ=90° or270°)		Cr≥10		-20~+40	0	Dea	3	
Angle	<i>θ</i> 2 (<i>Φ</i> =0° or 180°)		01210	-45~+45			Deg	J	
Contrast Ratio	Cr		<i>θ</i> =0°		350		-	4	
Response	t _{on}		Φ=0°	-	25	40	ms	5	
Time	t _{off}			-	25	40	ms		
	W	х		-	TBD	1	-		
	VV	у] [-	TBD	1	-		
	R	х		-	TBD	1	-		
Color of CIE	K	у		_	TBD	-	-	1,6	
Coordinate	G	х	<i>θ</i> =0° Φ=0°	_	TBD	-	-		
	G	у	Ψ=0	-	TBD	-	-		
	В	Х		-	TBD	_	-		
	_ D	у		_	TBD	-	-		
NTSC Ratio		S		TBD	TBD				

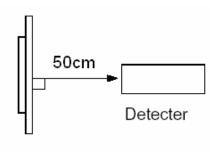

Note: The parameter is slightly changed by temperature, driving voltage and materiel.

Note 1: The data are measured after LEDs are turned on for 5 minutes. LCM displays full white. The brightness is the average value of 9 measured spots. Measurement equipment PR-705 (Φ 8mm)

Measuring condition:

- Measuring surroundings: Dark room.
- Measuring temperature: Ta=25℃.
- Adjust operating voltage to get optimum contrast at the center of the display.

Measured value at the center point of LCD panel after more than 5 minutes while backlight turning on.

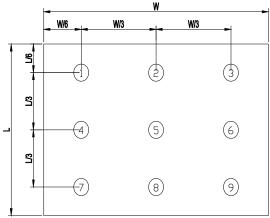

Note 2: The luminance uniformity is calculated by using following formula.

 \triangle Bp = Bp (Min.) / Bp (Max.)×100 (%)

Bp (Max.) = Maximum brightness in 9 measured spots

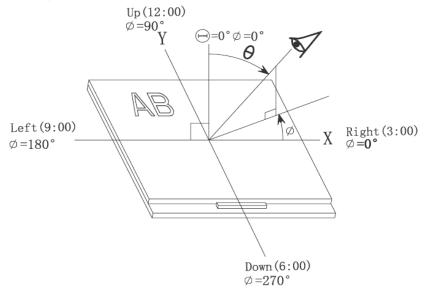

Bp (Min.) = Minimum brightness in 9 measured spots.

Measurement equipment PR-705 (Φ8mm)

Note 3: The definition of viewing angle: Refer to the graph below marked by θ and Φ

Note 4: The definition of contrast ratio (Test LCM using PR-705):

Contrast Ratio(CR)= Luminance When LCD is at "White" state

Luminance When LCD is at "Black" state

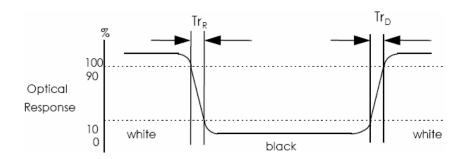

(Contrast Ratio is measured in optimum common electrode voltage)

Note 5: Definition of Response time. (Test LCD using DMS501):

The output signals of photo detector are measured when the input signals are changed

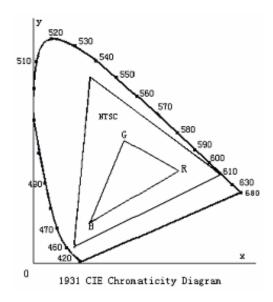

Microelectronics Co.,LTDfrom "black" to "white" (falling time) and from "white" to "black" (rising time), respectively. The response time is defined as the time interval between the 10% and 90% of amplitudes. Refer to figure as below.

The definition of response time

Note 6: Definition of Color of CIE Coordinate and NTSC Ratio.

Color gamut:

$$S = \frac{area \ of \ RGB \ triangle}{area \ of \ NTSC \ triangle} \times 100\%$$

7. Reliability Test Items and Criteria

No	Test Item	Test condition	Criterion		
1	High Temperature Storage	80°C±2°C 96H Restore 2H at 25°C Power off	1. After testing, cosmetic and electrical defects should not happen. 2.Total current consumption should not be more than twice		
2	Low Temperature Storage	-30℃±2℃ 96H Restore 2H at 25℃ Power off			
3	High Temperature Operation	70°C±2°C 96H Restore 2H at 25°C Power on			
4	Low Temperature Operation	-20℃±2℃ 96H Restore 4H at 25℃ Power on			
5	High Temperature/Humidity Operation	60℃±2℃ 90%RH 96H Power on	of initial value.		
6	Temperature Cycle	-30°C → 25°C → 80°C 30min 5min 30min after 10cycle, Restore 2H at 25°C Power off			
7	Vibration Test	10Hz~150Hz, 100m/s ² , 120min	Not allowed cosmetic		
8	Shock Test	Half- sine wave,300m/s ² ,11ms	and electrical defects.		
9	Drop Test(package state)	800mm, concrete floor,1corner, 3edges, 6 sides each time	1.After testing, cosmetic and electrical defects should not happen. 2.the product should remain at initial place 3.Product uncovered or package broken is not permitted.		

Note:Additional test Item proposed by customer shall be determined by mutual agreement between customer and Tianma

8 Quality level

8.1 Classification of defects

Major defects (MA): A major defect refers to a defect that may substantially degrade usability for product applications. All functional defects: no display display abnormally open or missing segment short circuit, missing component, outline dimension beyond the drawing, and progressive defects and those affecting reliability.

Miner defects (MI): A minor defect refers to a defect which is not considered to be able substantially degrade the product application or a defect that deviates from existing standards almost unrelated to the effective use of the product or its operation. Black spot, White spot, Bright spot, Pinhole, Black line, White line, Contrast variation, Bubble(Bubble in the cell is not included), Glass defect, and Polarizer defect beyond the standard as follows.

8.2 Definition of inspection range

For dot defect of TFT LCD which is not smaller than 3 inches, dividing three areas to make a judgment (according to figure 1).

A area : center of viewing area

B area : periphery of viewing area

C area: Outside viewing area

For other defects, dividing two areas to make a judgment (according figure 2).

A zone : Inside Viewing area B zone : Outside Viewing area

B zone

WY2

Active Area(AA)

Viewing Area

A zone: Viewing Area(VA)

Figure 1

Figure 2

8.3 Inspection items and general notes

General notes	①Should any defects which are not specified in this standard happen, additional standard shall be determined by mutual agreement between customer and TIANMA. ②Viewing area should be the area which TIANMA guarantees. ③Limited sample should be prior to this Inspection standard. ④Viewing judgment should be under static pattern. ⑤Inspection conditions Inspection distance: 250 mm (from the sample) Inspection angle: 45 degrees in 6 o'clock direction (all defects in viewing area should be inspected from this direction)						
Inspection items	Pinhole, Bright spot, Black spot, White spot, Black line, White Line, Foreign particle, Bubble	The color of a small area is different from the remainder. The phenomenon doesn't change with voltage					
	Contrast variation	The color of a small area is different from the remainder. The phenomenon changes with voltage					
	Polarizer defect	Scratch, Dirt, Particle, Bubble on polarizer or between polarizer and glass					
	Dot defect (TFT LCD)	the pixel appears bright or dark abnormally when display.					

	vijena eje er namijegija	
	Functional defect	no display, display abnormally, open or missing segment, short circuit, False viewing direction
	Glass defect	Glass crack, Shaved corner of glass, Surplus glass
	Segment defect	Pin holes or cracks in segment, Transformation of segment
	PCB defect	Components assembly defect

8.4 Outgoing Inspection level

Outgoing Inspection	Inapartian conditions		Inspection					
standard	Inspection conditions	Min.	Min. Max. Unit		ᆜ	AQL		
Major Defects	See 8.3 general notes	9	See 8.	3.5 I		0.65		
Minor Defects	See 8.3 general notes	See		5	=	1.5		
Note: Sampling standard conforms to GB2828								

8.5 Inspection Items and Criteria

		Component soldering: No cold soldering short open circuit burr tin ball The flat encapsulation component position deviation must be less than 1/3 width of the pin (Pic.1); the sheet component deviation: Pin deviates from the pad and contact with the near components is not permitted (Pic.2) lead defect: The lead lack must be less than 1/3 of its width; The lead burr must be less than 1/3 of the seam; Impurities connect with the near leads is not permitted	Component Component Component Component Component Lead Load Load
16	PCB defect	Connector soldering: Soldering tin is at contact position of the plug and socket is not permitted No foundation is scald Serious cave distortion on plug and socket contact pin is not permitted	Soldering tin is not permit in this area Soldering tin is not permit in this area Socket Base Board
		Glue on root of the speaker receiver and motor lead: The insulative coat of the lead must join into the PCB; the protected glue must envelop to the insulative coat.	Glue Lead PCB Insulative coat

9. Precautions for Use of LCD Modules

9.1 Handling Precautions

- 9.1.1 The display panel is made of glass. Do not subject it to a mechanical shock by dropping it from a high place, etc.
- 9.1.2 If the display panel is damaged and the liquid crystal substance inside it leaks out, be sure not to get any in your mouth, if the substance comes into contact with your skin or clothes, promptly wash it off using soap and water.
- 9.1.3 Do not apply excessive force to the display surface or the adjoining areas since this may cause the color tone to vary.
- 9.1.4 The polarizer covering the display surface of the LCD module is soft and easily scratched. Handle this polarizer carefully.
- 9.1.5 If the display surface is contaminated, breathe on the surface and gently wipe it with a soft dry cloth. If still not completely clear, moisten cloth with one of the following solvents:
 - Isopropyl alcohol
 - Ethyl alcohol

Solvents other than those mentioned above may damage the polarizer. Especially, do not use the following:

- Water
- Ketone
- Aromatic solvents
- 9.1.6 Do not attempt to disassemble the LCD Module.
- 9.1.7 If the logic circuit power is off, do not apply the input signals.
- 9.1.8 To prevent destruction of the elements by static electricity, be careful to maintain an optimum work environment.
 - a. Be sure to ground the body when handling the LCD Modules.
 - b. Tools required for assembly, such as soldering irons, must be properly ground.
 - c. To reduce the amount of static electricity generated, do not conduct

assembly and other work under dry conditions.

d. The LCD Module is coated with a film to protect the display surface. Be care when peeling off this protective film since static electricity may be generated.

9.2 Storage precautions

- 9.2.1 When storing the LCD modules, avoid exposure to direct sunlight or to the light of fluorescent lamps.
- 9.2.2 The LCD modules should be stored under the storage temperature range. If the LCD modules will be stored for a long time, the recommend condition is:

Temperature : 0° \sim 40 $^{\circ}$

Relatively humidity: ≤80%

- 9.2.3 The LCD modules should be stored in the room without acid, alkali and harmful gas.
- 9.3 The LCD modules should be no falling and violent shocking during transportation, and also should avoid excessive press, water, damp and sunshine.
