

## Alaonix 256x160 Smart LCD display

Alaonix 256x160 (3.2" And 5.0") LCD display is a monochrome smart display. It is strongly recommended that you read the manual before using the 256x160 smart LCD display. Alaonix LCD display makes it even quicker and easier for you to make your projects or products with any microcontrollers (MCUs). The operate command language is much simpler, easier to read and write. It can do many things that you want. And it also saves your MCU's space, your time and save your money.

### SPECS

Power: 5V or 3.3V VDC < 100mA (with LCD backlight)

PCB: Size: 94mm x 70mm

Speed: 19200 Baud.

Media: Uses FAT16 MMC or SD memory cards from 32 MB to 2GB.

### PIN FUNCTIONS

**3.3V** Supply voltage to LCD Display

**5V** Supply voltage to LCD Display

**Reset:** This pin can be set at the low level to restart module, if the module stops working for any reason.

**Busy:** This pin shows the module work state. If the LCD display is busy, the pin output level will be high (LED light will be on)

**Tx:** Serial output connection. The LCD display allows 19200 baud.

**Rx:** Serial input connection. The LCD display allow 19200 baud.

**GND:** Power supply and serial ground. This MUST also be connected to ground on the device to allow the serial data to be sent to the modul

MINIMUM CONNECTION

What is new?

- 1) MMC function: This function can help user to save images, data, command code and customer's font files.
- 2) The LCD module can automatically display monochrome bitmap images (width  $\leq 256$ , height  $\leq 160$ ).
- 3) It also includes more Geometry functions. It can help customers to draw lines, dash lines, Horizontal lines, vertical lines, Rectangle, Square, Ellipse, Triangle..... It has an analog needle meter function for customers.
- 4) It has more different size fonts, numbers and segment's numbers. If customer want to use his own style font, it is very easy to achieve.

It is a very powerful product. Please see sample videos and sample codes for help.

### LIABILITY WARNING:

This device should be used only for experimental purposes. It has **NOT** gone through extensive testing and it could erase or corrupt some or all data on media cards that are inside the device. You assume to take your own risk when you purchase this device, and release the responsibility and liability from the manufacturer with no harm.

### REGULATORY WARNING:

This device is intended solely for experimental purpose, it is not in finished product form and is **NOT** FCC approved. If you wish to install these modules into non-experimental final finished products, you will be responsible to have the modules approved by the FCC at your own cost.

## Alaonix 256x160 smart LCD display commands

**Note:** When the command is sent, the display needs a pause to process the command, the busy pin will be HIGH. And it will be LOW after finishing the process.

### Extension Command A:

#### C: Fill selected buffer

|                    |  |
|--------------------|--|
| <b>Prototype</b>   | AC, Color, Buffer#   |
| <b>Description</b> | C; Fill selected LCD buffer and load the data to screen.<br>c; Fill selected LCD buffer and <b>not</b> load the data to screen.:   |
| <b>Parameters</b>  | <ul style="list-style-type: none"><li>• Color: color parameter. Valid values: 0 - 1</li><li>• Buffer#: buffer parameter. Valid values: 0 - 5</li><li>• The parameter color determines: 0 white, 1 black, and 2 inverts each dot.</li></ul> |
| <b>Example</b>     | copy buffer number = 0 to LCD display with white color:<br><b>AC,0,0</b> or <b>Ac,0,0</b>  |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)  |

#### D: Copy selected buffer to screen

|                    |  |
|--------------------|--|
| <b>Prototype</b>   | AD, Buffer#  |
| <b>Description</b> | Copy selected buffer data to screen.   |
| <b>Parameters</b>  | <ul style="list-style-type: none"><li>• Buffer#: buffer parameter. Valid values: 0 - 5</li></ul> |
| <b>Example</b>     | copy buffer number = 2 to LCD display:<br><b>AD,2</b>  |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)  |

### T: Copy data from buffer A to Buffer B

|                    |  |
|--------------------|--|
| <b>Prototype</b>   | AT,Buffer_A,Buffer_B   |
| <b>Description</b> | Only copy data from one buffer to another buffer.  |
| <b>Parameters</b>  | <ul style="list-style-type: none"><li>• Buffer_A: data is on this Buffer, Valid values: 0 – 5</li><li>• Buffer_B: data will be on this Buffer, Valid values: 0 – 5</li></ul> |
| <b>Example</b>     | copy data from buffer number = 2 to buffer number = 4<br>AT,2,4  |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)  |

### R: Reverse buffer data

|                    |  |
|--------------------|--|
| <b>Prototype</b>   | AR.Buffer#   |
| <b>Description</b> | Reverse buffer data  |
| <b>Parameters</b>  | <ul style="list-style-type: none"><li>• Buffer#: Buffer parameter. Valid values: 0 – 5</li></ul> |
| <b>Example</b>     | Reverse buffer number = 3 data.<br>AR,3  |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)  |

### O: Turn LCD display ON or OFF

|                    |   |
|--------------------|---|
| <b>Prototype</b>   | AO,n  |
| <b>Description</b> | Turn LCD display ON or OFF  |
| <b>Parameters</b>  | <ul style="list-style-type: none"><li>• n = command parameter. Valid values: 0 – 1. 0 = OFF, 1 = ON (default n = 1)</li></ul> |
| <b>Example</b>     | Turn LCD display OFF<br>AO,0  |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)   |

### I: Set LCD display to White/Black or Black/White

|                    |   |
|--------------------|---|
| <b>Prototype</b>   | AI,n  |
| <b>Description</b> | Set LCD display to Normal display or Inverse Display.   |
| <b>Parameters</b>  | <ul style="list-style-type: none"><li>• n = command parameter. Valid values: 0 – 1. 0 = Normal display, 1 = Inverse Display</li><li>• (default n = 0)</li></ul> |
| <b>Example</b>     | Set LCD display as Normal display<br>AI,0   |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A).<br>Some model LCDs do not support Inverse display.   |

### B: Adjust LCD display backlight

|                    |   |
|--------------------|---|
| <b>Prototype</b>   | AB,n  |
| <b>Description</b> | Adjust LCD display backlight  |
| <b>Parameters</b>  | <ul style="list-style-type: none"><li>n = command parameter. Valid values: 0 – 10. (Default n = 10)</li><li>(default n = 0)</li></ul> |
| <b>Example</b>     | Adjust LCD display backlight values = 8<br>AB,8   |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)   |

### V: Adjust LCD display contrast

|                    |  |
|--------------------|--|
| <b>Prototype</b>   | AV, contrast_data  |
| <b>Description</b> | Adjust LCD display contrast.   |
| <b>Parameters</b>  | contrast_data; contrast data parameter. Valid values: 0 – 255. (Default n = 157) |
| <b>Example</b>     | AV,  |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)                              |

### S: Save as default setting

|                    |  |
|--------------------|--|
| <b>Prototype</b>   | AS,  |
| <b>Description</b> | Save default setting data to EEPROM. (LCD = Black/White, Backlight = 10, Trans |
| <b>Parameters</b>  | None   |
| <b>Example</b>     | AS,  |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)                            |

## Extension Command F: (Write text)

### A: Write text to screen

|                    |  |
|--------------------|--|
| <b>Prototype</b>   | FA,font#,x_position,y_postion,space,color,buffer#,text   |
| <b>Description</b> | A: Write text to LCD buffer and copy the buffer data to screen.<br>a: Write text to LCD buffer and <b>not</b> copy the buffer to screen.   |
| <b>Parameters</b>  | <ul style="list-style-type: none"><li>• Font#: font type or buffer number.</li><li>• x_position: text starting position on x-axis.</li><li>• y_position: text starting position on y-axis.</li><li>• space: distance between characters</li><li>• color: color parameter. Valid values: 0 - 1</li><li>• buffer#: buffer parameter. Valid values: 0 - 5</li><li>• text: text to be written.</li></ul> |
| <b>Example</b>     | Write Times New Roman 29x26 font "Hello, world!" to LCD screen<br><b>FA,21,10,20,2,1,0,Hello,word!</b>   |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)  |

### B: Write character on the screen

|                    |  |
|--------------------|--|
| <b>Prototype</b>   | FB,font#,x_position,y_postion,color,character  |
| <b>Description</b> | B: Write character to LCD buffer and copy the buffer data to screen.<br>b: Write character to LCD buffer and <b>not</b> copy the buffer data to screen.  |
| <b>Parameters</b>  | <ul style="list-style-type: none"><li>• Font#: font type or buffer number.</li><li>• x_position: text starting position on x-axis.</li><li>• y_position: text starting position on y-axis.</li><li>• color: color parameter. Valid values: 0 - 1</li><li>• buffer#: buffer parameter. Valid values: 0 - 5</li><li>• text: character to be written.</li></ul> |
| <b>Example</b>     | Write Times New Roman 29x26 font "A" to LCD screen<br><b>FB,21,10,20,1,0,A</b>   |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)  |

### C: Write text to screen without back color

|                    |  |
|--------------------|--|
| <b>Prototype</b>   | FC,font#,x_position,y_postion,space,color,buffer#,text   |
| <b>Description</b> | C: Write text to LCD display without back color and copy buffer data to screen.<br>c: Write text to LCD display without back color and <b>not</b> copy buffer data to screen.  |
| <b>Parameters</b>  | <ul style="list-style-type: none"><li>• Font#: font type or buffer number.</li><li>• x_position: text starting position on x-axis.</li><li>• y_position: text starting position on y-axis.</li><li>• space: distance between characters</li><li>• color: color parameter. Valid values: 0 - 1</li><li>• buffer#: buffer parameter. Valid values: 0 - 5</li><li>• text: text to be written.</li></ul> |
| <b>Example</b>     | Write Times New Roman 29x26 font “Hello, world!” to LCD screen<br><b>FC,21,10,20,2,1,0,Hello,word!</b>   |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)  |

### D: Write character on the screen

|                    |  |
|--------------------|--|
| <b>Prototype</b>   | FD,font#,x_position,y_postion,color,character  |
| <b>Description</b> | D: Write character to LCD display without back color and copy the buufer data to screen.<br>d: Write character to LCD display without back color and <b>not</b> copy the buufer data to screen.  |
| <b>Parameters</b>  | <ul style="list-style-type: none"><li>• Font#: font type or buffer number.</li><li>• x_position: text starting position on x-axis.</li><li>• y_position: text starting position on y-axis.</li><li>• color: color parameter. Valid values: 0 - 1</li><li>• buffer#: buffer parameter. Valid values: 0 - 5</li><li>• text: character to be written.</li></ul> |
| <b>Example</b>     | Write Times New Roman 29x26 font “A” to LCD screen<br><b>FD,21,10,20,1,0,A</b>   |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)  |

### L: Load customer font to a selected buffer from SD Card

|                    |  |
|--------------------|--|
| <b>Prototype</b>   | FL,buffer#,font_name   |
| <b>Description</b> | Load a customer font to a select buffer from SD Card.  |
| <b>Parameters</b>  | <ul style="list-style-type: none"><li>• buffer#: buffer parameter. Valid values: 0 - 5</li><li>• font_name: customer make the font name.</li></ul> |
| <b>Example</b>     | Load a customer font “my_font” to buffer number = 5<br><b>FL,5,my_font</b>   |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)  |

## Font number, type, size and buffer size: (in system)

The display use Fonts with the Microchip Graphics Library (AN1182). Please visit Microchip web for detail.

|                            | Code for char num |
|----------------------------|-------------------|
| 10 = Arial_Narrow_8x11     | 32 - 127          |
| 11 = Arial_Narrow_12x15    | 32 - 127          |
| 12 = Arial_Narrow_18x20    | 32 - 127          |

- 5 = buffer5, size = 5kb

## Extension Command G: (Geometry)

### A: Draw a line to LCD display

|                    |   |
|--------------------|---|
| <b>Prototype</b>   | GA, x_start, y_start, x_end, y_end,color,buffer#  |
| <b>Description</b> | A: Draws a line to buffer and copy the buffer to screen.<br>a: Draws a line to buffer and <b>not</b> copy the buffer to screen.   |
| <b>Parameters</b>  | <ul style="list-style-type: none"><li>• x_start: x coordinate of the line start. Valid values: 0 - 255</li><li>• y_start: y coordinate of the line start. Valid values: 0 - 255</li><li>• y_end: y coordinate of the line end. Valid values: 0 - 159</li><li>• color: color parameter. Valid values: 0 - 1</li><li>• buffer#: buffer parameter. Valid values: 0 - 5</li></ul> |
| <b>Example</b>     | Draw a line between dots (0,0) and (255,159), color = 1 buffer# = 0 on LCD display<br><b>GA,0,0,255,159,1,0</b>   |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)   |

### B: Draw a horizontal line on LCD display

|                    |  |
|--------------------|--|
| <b>Prototype</b>   | GB, x_start, x_end, y_position, size, color, buffer#   |
| <b>Description</b> | A: Draws a Horizontal line to buffer and copy the buffer to screen.<br>a: Draws a Horizontal line to buffer and <b>not</b> copy the buffer to screen.  |
| <b>Parameters</b>  | <ul style="list-style-type: none"><li>• x_start: x coordinate of the line start. Valid values: 0 - 255</li><li>• x_end: x coordinate of the line end. Valid values: 0 - 255</li><li>• y_position: y coordinate of horizontal line position. Valid values: 0 - 159</li><li>• size: line size</li><li>• color: color parameter. Valid values: 0 - 1</li><li>• buffer#: buffer parameter. Valid values: 0 - 5</li></ul> |
| <b>Example</b>     | Draw a Horizontal line size = 2 dots, between dots (10,50) and (200,50) color = 1, buffer# = 0 on LCD display<br><b>GB,10,200,50,2,1,0</b>   |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)  |

### C: Draw a vertical line on LCD display

|                    |  |
|--------------------|--|
| <b>Prototype</b>   | GC, x_position, y_start, y_end, size, color, buffer#   |
| <b>Description</b> | C: Draws a vertical line to buffer and copy the buffer to screen.<br>c: Draws a vertical line to buffer and <b>not</b> copy the buffer to screen.  |
| <b>Parameters</b>  | <ul style="list-style-type: none"> <li>• x_position: x coordinate vertical line position. Valid values: 0 - 255</li> <li>• y_start: y coordinate of the line start. Valid values: 0 - 159</li> <li>• y_end: x coordinate of the line end. Valid values: 0 - 159</li> <li>• size: line size</li> <li>• color: color parameter. Valid values: 0 - 1</li> <li>• buffer#: buffer parameter. Valid values: 0 - 5</li> </ul> |
| <b>Example</b>     | Draw a vertical line size = 3 dots, between dots (100,10) and (100,150), color = 1, buffer# = 0 on LCD display<br><b>GC,100,10,150,3,1,0</b>   |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)  |

### D: Draw a horizontal dash line on LCD display

|                    |  |
|--------------------|--|
| <b>Prototype</b>   | GD, x_start, x_end, y_position, size, dash_length, dash_space, color, buffer#  |
| <b>Description</b> | D: Draws a Horizontal dash line to buffer and copy the buffer to screen.<br>d: Draws a Horizontal dash line to buffer and <b>not</b> copy the buffer to screen.  |
| <b>Parameters</b>  | <ul style="list-style-type: none"> <li>• x_start: x coordinate of the dash line start. Valid values: 0 - 255</li> <li>• x_end: y coordinate of the dash line start. Valid values: 0 - 255</li> <li>• y_position: y coordinate of the dash line position. Valid values: 0 - 159</li> <li>• size: line size</li> <li>• dash_length = dash line solid size + space size</li> <li>• dash_space = dash line space size</li> <li>• color: color parameter. Valid values: 0 - 1</li> <li>• buffer#: buffer parameter. Valid values: 0 - 5</li> </ul> <div style="text-align: center; margin-top: 10px;"> </div> |
| <b>Example</b>     | Draw a Horizontal dash line size = 2 dots, between dots (10,50) and (200,50), dash_length = 10, dash_space = 4 color = 1, buffer# = 0 on LCD display<br><b>GD,10,220,60,2,10,4,1,0</b>   |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)  |

### V: Draw a vertical dash line on LCD display

|                    |   |
|--------------------|---|
| <b>Prototype</b>   | GE, x_position, y_start, y_end, size, dash_length, dash_space, color, buffer#   |
| <b>Description</b> | V: Draws a vertical dash line to buffer and copy the buffer to screen.<br>v: Draws a vertical dash line to buffer and <b>not</b> copy the buffer to screen.   |
| <b>Parameters</b>  | <ul style="list-style-type: none"> <li>• x_position: x coordinate of the dash line position. Valid values: 0 - 255</li> <li>• y_start: y coordinate of the dash line start. Valid values: 0 - 159</li> <li>• y_end: y coordinate of the dash line end. Valid values: 0 - 159</li> <li>• size: line size</li> <li>• dash_length = dash line solid size + space size</li> <li>• dash_space = dash line space size</li> <li>• color: color parameter. Valid values: 0 - 1</li> <li>• buffer#: buffer parameter. Valid values: 0 - 5</li> </ul> |
| <b>Example</b>     | Draw a vertical dash line size = 3 dots, between dots (70,10) and (70,150), dash_length = 10, dash_space = 3, color = 1, buffer# = 0 on LCD display<br><b>GV,70,10,150,3,10,3,1,0</b>   |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)   |

### F: Draw a Rectangle on LCD display

|                    |   |
|--------------------|---|
| <b>Prototype</b>   | GF, x_start, y_start, x_end, y_end, fill, color, buffer#  |
| <b>Description</b> | F: Draws a rectangle to buffer and copy the buffer to screen.<br>f: Draws a rectangle to buffer and <b>not</b> copy the buffer to screen.   |
| <b>Parameters</b>  | <ul style="list-style-type: none"> <li>• x_start: x coordinate of the rectangle start. Valid values: 0 - 255</li> <li>• y_start: y coordinate of the rectangle start. Valid values: 0 - 159</li> <li>• x_end: x coordinate of the rectangle end. Valid values: 0 - 255</li> <li>• y_end: y coordinate of the rectangle start. Valid values: 0 - 159</li> <li>• fill: fill parameter. Valid values: 0 - 1 (0 = not fill, 1 = fill)</li> <li>• color: color parameter. Valid values: 0 - 1</li> <li>• buffer#: buffer parameter. Valid values: 0 - 5</li> </ul> |
| <b>Example</b>     | Draw a rectangle width size = 150 - 30, high size = 120 - 30, fill = 1, color = 1, buffer# = 0 box on LCD display<br><b>GF,30,30,150,120,1,1,0</b>  |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)   |

### G: Draw a square on LCD display

|                    |   |
|--------------------|---|
| <b>Prototype</b>   | GG, x_start, y_start, Side_length, fill, color, buffer#   |
| <b>Description</b> | G: Draws a square to buffer and copy the buffer to screen.<br>g: Draws a square to buffer and <b>not</b> copy the buffer to screen.   |
| <b>Parameters</b>  | <ul style="list-style-type: none"><li>• x_start: x coordinate of the square start. Valid values: 0 - 255</li><li>• y_start: y coordinate of the square start. Valid values: 0 - 159</li><li>• Side length: square side length</li><li>• fill: fill parameter. Valid values: 0 - 1 (0 = not fill, 1 = fill)</li><li>• color: color parameter. Valid values: 0 - 1</li><li>• buffer#: buffer parameter. Valid values: 0 - 5</li></ul> |
| <b>Example</b>     | Draw a square start position (30, 30), size length = 100, fill = 1, color = 1, buffer# = 0 box on LCD display<br><b>GG,30,30,100,1,1,0</b>  |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)   |

### H: Draw an ellipse on LCD display

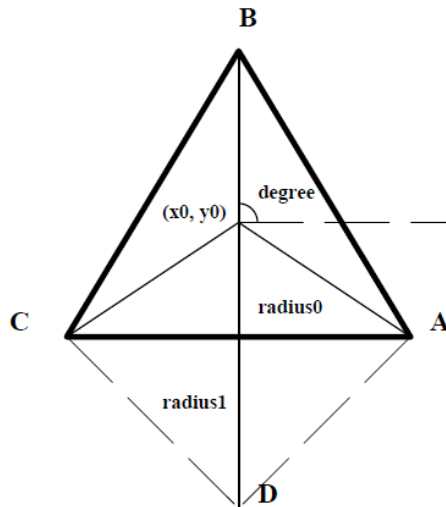

|                    |   |
|--------------------|---|
| <b>Prototype</b>   | GH,x_center, y_center, h_radius, v_radius, fill, color, buffer#   |
| <b>Description</b> | H: Draws ellipse to buffer and copy the buffer to screen.<br>h: Draws ellipse to buffer and <b>not</b> copy the buffer to screen.   |
| <b>Parameters</b>  | <ul style="list-style-type: none"><li>• x_center: x coordinate of the ellipse center. Valid values: 0 - 255</li><li>• y_center: y coordinate of the ellipse center. Valid values: 0 - 159</li><li>• h_radius: ellipse horizontal radius size</li><li>• v_radius: ellipse vertical radius size</li><li>• fill: fill parameter. Valid values: 0 - 1 (0 = not fill, 1 = fill)</li><li>• color: color parameter. Valid values: 0 - 1</li><li>• buffer#: buffer parameter. Valid values: 0 - 5</li></ul> |
| <b>Example</b>     | Draw an ellipse center point (128, 80), horizontal radius size = 70, vertical radius size = 40, fill = 1, color = 1, buffer# = 0 on LCD display<br><b>GH,128,80,70,40,1,1,0</b>   |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)   |

### I: Draw a circle on LCD display

|                    |  |
|--------------------|--|
| <b>Prototype</b>   | GI, x_center, y_center, radius, fill, color, buffer#   |
| <b>Description</b> | I: Draws circles to buffer and copy the buffer to screen.<br>i: Draws circles to buffer and <b>not</b> copy the buffer to screen.  |
| <b>Parameters</b>  | <ul style="list-style-type: none"> <li>• x_center: x coordinate of the circles center. Valid values: 0 - 255</li> <li>• y_center: y coordinate of the circles center. Valid values: 0 - 159</li> <li>• radius: circles radius size</li> <li>• fill: fill parameter. Valid values: 0 – 1 (0 = not fill, 1 = fill)</li> <li>• color: color parameter. Valid values: 0 - 1</li> <li>• buffer#: buffer parameter. Valid values: 0 - 5</li> </ul> |
| <b>Example</b>     | Draw a circles center point (128, 80), radius size = 550, fill = 1, color = 1, buffer# = 0 on LCD display.<br><b>GI,128,80,55,1,1,0</b>  |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)  |

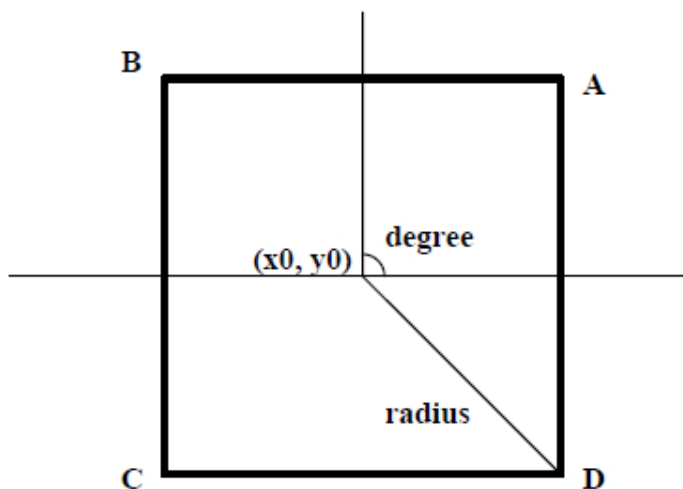

### J: Draw a rotatable triangle on LCD display

|                    |   |
|--------------------|---|
| <b>Prototype</b>   | GJ, x_center, y_center, radius0, radius1, degree, type, fill, color, buffer#  |
| <b>Description</b> | J: Draw a rotatable triangle to buffer and copy the buffer to screen.<br>j: Draw a rotatable triangle to buffer and <b>not</b> copy the buffer to screen.   |
| <b>Parameters</b>  | <ul style="list-style-type: none"> <li>• x_center: x coordinate of the triangle center. Valid values: 0 - 255</li> <li>• y_center: y coordinate of the triangle center. Valid values: 0 - 159</li> <li>• radius0: standard triangle radius size</li> <li>• radius1: customer triangle radius size</li> <li>• degree: a degree.</li> <li>• select: select a customer triangle style. Valid values: 0 – 3<br/>0 = ABC, 1 = ABD, 2 = ACD, 3 = BCD (see fig. for detail.)</li> <li>• fill: fill parameter. Valid values: 0 – 1 (0 = not fill, 1 = fill)</li> <li>• color: color parameter. Valid values: 0 - 1</li> <li>• buffer#: buffer parameter. Valid values: 0 - 5</li> </ul> |
| <b>Example</b>     | Draw a standard triangle center position (128, 80), radius size = 45, radius1 = not use, degree = 90, select = 0, fill = 1, color = 1, buffer# = 0 on LCD display.<br><b>GJ,128,80,45,0,90,0,1,0,0</b>  |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)   |

**K: Draw a rotatable square on LCD display**

|                    |   |
|--------------------|---|
| <b>Prototype</b>   | GK, x_center, y_center, radius, degree, fill, color, buffer#  |
| <b>Description</b> | K: Draw a rotatable square to buffer and copy the buffer to screen.<br>k: Draw a rotatable square to buffer and <b>not</b> copy the buffer to screen.   |
| <b>Parameters</b>  | <ul style="list-style-type: none"> <li>• x_center: x coordinate of the triangle center. Valid values: 0 - 255</li> <li>• y_center: y coordinate of the triangle center. Valid values: 0 - 159</li> <li>• radius: Semi-diagonal</li> <li>• degree: a degree.</li> <li>• fill: fill parameter. Valid values: 0 - 1 (0 = not fill, 1 = fill)</li> <li>• color: color parameter. Valid values: 0 - 1</li> <li>• buffer#: buffer parameter. Valid values: 0 - 5</li> </ul> |
| <b>Example</b>     | Draw a standard square center position (128, 80), radius size = 45, radius1 = not use, degree = 90, select = 0, fill = 1, color = 1, buffer# = 0 on LCD display.<br><b>GK,128,80,45,0,0,1,0</b>   |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)   |

### L: Draw a dot on LCD display

|                    |   |
|--------------------|---|
| <b>Prototype</b>   | GL, x_position, y_position, color, buffer#  |
| <b>Description</b> | L: Draw a dot(pixel) to buffer and copy the buffer to screen.<br>l: Draw a dot(pixel) square to buffer and <b>not</b> copy the buffer to screen.  |
| <b>Parameters</b>  | <ul style="list-style-type: none"> <li>• x_position: x coordinate of the dot. Valid values: 0 - 255</li> <li>• y_position: y coordinate of the dot. Valid values: 0 - 159</li> <li>• color: color parameter. Valid values: 0 - 1</li> <li>• buffer#: buffer parameter. Valid values: 0 - 5</li> </ul> |
| <b>Example</b>     | Draw a pixel (128, 80), color = 1, buffer# = 0 on LCD display.<br><b>GL,128,80,1,0</b>  |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)   |

### M: Draw a horizontal value bar on LCD display

|                    |   |
|--------------------|---|
| <b>Prototype</b>   | GM, x_position, y_position, y_end position, size, value, color, buffer#   |
| <b>Description</b> | M: Draw a horizontal value bar to buffer and copy the buffer to screen.<br>m: Draw a horizontal value bar square to buffer and <b>not</b> copy the buffer to screen.  |
| <b>Parameters</b>  | <ul style="list-style-type: none"> <li>• x_position: x coordinate of the bar start. Valid values: 0 - 255</li> <li>• y_position: y coordinate of the bar start. Valid values: 0 - 159</li> <li>• y_end position: the value bar end position</li> <li>• value: value bar solid size</li> <li>• size: the bar size.</li> <li>• color: color parameter. Valid values: 0 - 1</li> <li>• buffer#: buffer parameter. Valid values: 0 - 5</li> </ul> |
| <b>Example</b>     | Draw a horizontal value bar (10,10), y_end = 200, size = 20, color = 1, buffer# = 0 on LCD display.<br><b>GM,10,10,200,20,80,1,0</b>  |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)   |

#### N: Draw a vertical value bar on LCD display

|                    |   |
|--------------------|---|
| <b>Prototype</b>   | GN, x_position, y_position, x_end position, size, value, color, buffer#   |
| <b>Description</b> | N: Draw a vertical value bar to buffer and copy the buffer to screen.<br>n: Draw a vertical value bar square to buffer and <b>not</b> copy the buffer to screen.  |
| <b>Parameters</b>  | <ul style="list-style-type: none"><li>• x_position: x coordinate of the bar start. Valid values: 0 - 255</li><li>• y_position: y coordinate of the bar start. Valid values: 0 - 159</li><li>• x_end position: the value bar end position</li><li>• value: value bar solid size</li><li>• size: the bar size.</li><li>• color: color parameter. Valid values: 0 - 1</li><li>• buffer#: buffer parameter. Valid values: 0 - 5</li></ul> |
| <b>Example</b>     | Draw a horizontal value bar (30,10), x_end = 150, size = 20, color = 1, buffer# = 0 on LCD display.<br><b>GN,30,10,150,20,80,1,0</b>  |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)   |

#### Extension Command M: (Secure Digital (SD) or Multi Media Card (MMC) )

##### P: Change current direction back to parents direction

|                    |   |
|--------------------|---|
| <b>Prototype</b>   | MP,   |
| <b>Description</b> | This function changes the current directory back to parents direction |
| <b>Parameters</b>  | None  |
| <b>Example</b>     | <b>MP,</b>  |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)                   |

##### R: Change current direction back to root direction

|                    |  |
|--------------------|--|
| <b>Prototype</b>   | MR,  |
| <b>Description</b> | This function changes the current directory back to root direction |
| <b>Parameters</b>  | None   |
| <b>Example</b>     | <b>MR,</b>   |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)                |

### I: show current direction information

|                    |  |
|--------------------|--|
| <b>Prototype</b>   | MI,  |
| <b>Description</b> | Show current direction information (the information will be sent to Rx port) |
| <b>Parameters</b>  | None   |
| <b>Example</b>     | <b>MI,</b>   |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)                          |

### U: Initial MMC card

|                    |   |
|--------------------|---|
| <b>Prototype</b>   | MU,   |
| <b>Description</b> | Initial MMC card or SD card.                        |
| <b>Parameters</b>  | None  |
| <b>Example</b>     | <b>MU,</b>  |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A) |

### J: change current direction next direction

|                    |  |
|--------------------|--|
| <b>Prototype</b>   | MJ,dir_name  |
| <b>Description</b> | change the current direction to next direction                   |
| <b>Parameters</b>  | Dir_name: the name is next direction name                        |
| <b>Example</b>     | Change current direction to Dir_A direction.<br><b>MJ, Dir_A</b> |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)              |

### N: create a new direction

|                    |   |
|--------------------|---|
| <b>Prototype</b>   | MN,dir_name   |
| <b>Description</b> | Create a new direction                              |
| <b>Parameters</b>  | Dir_name: the new name                              |
| <b>Example</b>     | Create a Dir_A direction.<br><b>MN, Dir_A</b>       |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A) |

### K: delete a direction

|                    |   |
|--------------------|---|
| <b>Prototype</b>   | MK,dir_name   |
| <b>Description</b> | Delete a direction                                  |
| <b>Parameters</b>  | Dir_name: the new name                              |
| <b>Example</b>     | delete a Dir_A direction.<br><b>MK, Dir_A</b>       |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A) |

### T: set date and time

|                    |   |
|--------------------|---|
| <b>Prototype</b>   | MT,year,month,day,hours,mins,seconds  |
| <b>Description</b> | Sets the date/time stamp. Any subsequent file write operation will write this stamp to the currently assigned file's time/date attributes.  |
| <b>Parameters</b>  | <ul style="list-style-type: none"><li>• year: year attribute. Valid values: 1980-2107</li><li>• month: month attribute. Valid values: 1-12</li><li>• day: day attribute. Valid values: 1-31</li><li>• hours: hours attribute. Valid values: 0-23</li><li>• mins: minutes attribute. Valid values: 0-59</li><li>• seconds: seconds attribute. Valid values: 0-59</li></ul> |
| <b>Example</b>     | <b>MT, 2020,5,30,18,38,0</b>  |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)   |

### C: create a file and write data to the file

|                    |   |
|--------------------|---|
| <b>Prototype</b>   | MC, x, file_name, data  |
| <b>Description</b> | Create a file and write data or text to the file.   |
| <b>Parameters</b>  | <ul style="list-style-type: none"><li>• x = 0 not new line, x = 1 add return at end of string.</li><li>• file_name: the new file name</li><li>• data: data to be written.</li></ul> |
| <b>Example</b>     | Create a new file and write text to the file. No new line.<br><b>MC, 0, my_file, hello,world!</b>   |
| <b>Notes</b>       | <b>Warn:</b> If the file exists and not empty its content will be erased.<br>Every command must have an end symbol (0x0D + 0x0A)  |

### A: append data to an exist file

|                    |   |
|--------------------|---|
| <b>Prototype</b>   | MA, x, file_name,data   |
| <b>Description</b> | Open a file and append data or text to the file.  |
| <b>Parameters</b>  | <ul style="list-style-type: none"><li>• x = 0 not new line, x = 1 add return at end of string.</li><li>• file_name: the file name</li><li>• data: data to be written.</li></ul> |
| <b>Example</b>     | Open a file and write text to the file. No new line.<br><b>MA, 0, my_file, hello,world!</b>   |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)   |

### D: delete an exist file

|                    |  |
|--------------------|--|
| <b>Prototype</b>   | MD, file_name  |
| <b>Description</b> | Delete an exist file   |
| <b>Parameters</b>  | <ul style="list-style-type: none"><li>• file_name: the file name</li></ul> |
| <b>Example</b>     | <b>MD, my_file,</b>  |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)                        |

### F: format MMC SD Card

|                    |   |
|--------------------|---|
| <b>Prototype</b>   | MF, label   |
| <b>Description</b> | Formats to <b>FAT16</b> MMC/SD card.<br><b>WARNING:</b> Formatting will erase ALL data on your MMC/SD card!   |
| <b>Parameters</b>  | <ul style="list-style-type: none"><li>• label: the file name</li></ul>  |
| <b>Example</b>     | <b>MF, my_label</b>   |
| <b>Notes</b>       | volume label (11 characters in length). If less than 11 characters are provided, the label will be padded with spaces. If null string is passed volume will not be labeled<br>Every command must have an end symbol (0x0D + 0x0A) |

### L: load image from MMC SD card to LCD display

|                    |  |
|--------------------|--|
| <b>Prototype</b>   | ML, x,y,color, buffer#, image name   |
| <b>Description</b> | L: Load an exist image from MMC SD card to a buffer and copy the buffer data to screen.<br>I: Load an exist image from MMC SD card to a buffer and <b>not</b> copy the buffer data to screen.                                  |
| <b>Parameters</b>  | <ul style="list-style-type: none"><li>• x: x coordinate of the image start.</li><li>• y: y coordinate of the image start</li><li>• color color parameter. Valid values: 0 - 1</li><li>• buffer#</li><li>• image name</li></ul> |
| <b>Example</b>     | load monochrome bitmap name my_image, w = 256, h = 160 to LCD display.<br><b>ML, 0,0,1,0,my_image</b>  |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)<br>The module only support 1 bit BMP (monochrome bitmap), width <= 256, height <= 160.   |

#### E: Execute a Program in MMC Card.

|                    |   |
|--------------------|---|
| <b>Prototype</b>   | ME, File Name   |
| <b>Description</b> | E: Execute a simple program in MMC card. This function can save more MCU Flash space.       |
| <b>Parameters</b>  | <ul style="list-style-type: none"><li>• File_Nmae = Customer program in MMC card.</li></ul> |
| <b>Example</b>     | load a simple program from MMC card<br><b>ME, my_file</b>                                   |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)   |

#### Y: Execute a Program in memory

|                    |  |
|--------------------|--|
| <b>Prototype</b>   | MY   |
| <b>Description</b> | E: Execute a simple program in memory before loading           |
| <b>Parameters</b>  |  |
| <b>Example</b>     | Execute a simple program in memory before loading<br><b>MY</b> |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)            |

#### S: save screen image to MMC SD card.

|                    |   |
|--------------------|---|
| <b>Prototype</b>   | MS, buffer#, image_name,  |
| <b>Description</b> | Save LCD display image to MMC SD card. The image size: width = 256, height = 160. |
| <b>Parameters</b>  | <ul style="list-style-type: none"><li>• image_name:</li><li>• buffer#</li></ul>   |
| <b>Example</b>     | save screen image to MMC SD card.<br><b>MS, 0, my_image,</b>                      |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)                               |

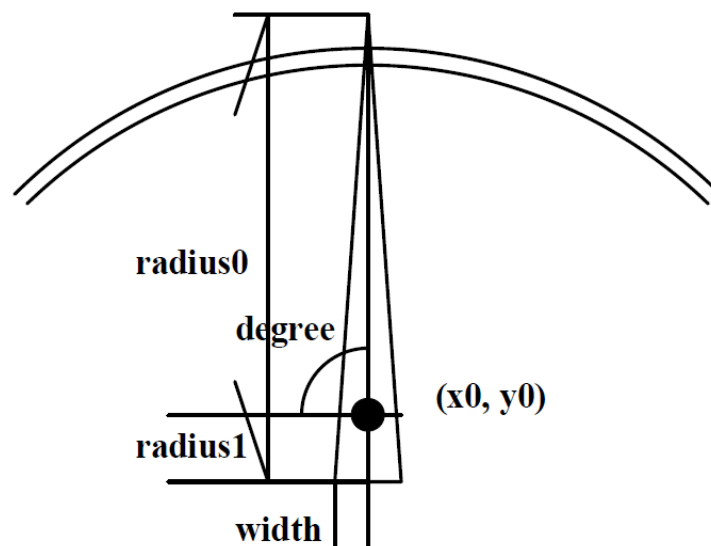

#### W: set waiting time (delay)

|                    |  |
|--------------------|--|
| <b>Prototype</b>   | MW,delay_#   |
| <b>Description</b> | Set a waiting time   |
| <b>Parameters</b>  | <ul style="list-style-type: none"><li>• delay#:</li><li>• 1 = 100ms</li><li>• 2 = 200ms</li><li>• 3 = 300ms</li><li>• 4 = 400ms</li><li>• 5 = 500ms</li><li>• 6 = 1000ms</li><li>• 7 = 1500ms</li><li>• 8 = 2000ms</li></ul> |
| <b>Example</b>     | MCU waiting 1000ms<br><b>MS, 6</b>   |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)  |

## Extension Command P: (Needle Function for meter and clock)

### A: Draw a triangle needle to buffer and show it to screen

|                    |  |
|--------------------|--|
| <b>Prototype</b>   | PA,x_center, y_center, Radius0, radius1,width,degree,fill,color,buffer#  |
| <b>Description</b> | A: Draw a triangle meter needle to buffer and copy the buffer data to screen.<br>a: Draw a triangle meter needle to buffer and <b>not</b> copy the buffer data to screen.  |
| <b>Parameters</b>  | <ul style="list-style-type: none"><li>• x_center: x coordinate of needle center of rotation</li><li>• y_center: y coordinate of needle center of rotation</li><li>• radius0: needle length</li><li>• radius1: needle end length</li><li>• width: needle width</li><li>• degree: degree</li><li>• fill: fill parameter. Valid values: 0 - 1 (0 = not fill, 1 = fill)</li><li>• color: color parameter. Valid values: 0 - 1</li><li>• buffer# buffer number parameter. Valid values: 0 - 5</li></ul> |
| <b>Example</b>     | Create a new file and write text to the file.<br><b>PA,128,20,100,10,3,90,0,1,0</b>  |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)  |

## B: Draw a line needle to buffer and show it to screen

|                    |  |
|--------------------|--|
| <b>Prototype</b>   | PB,x_center, y_center, Radius0, radius1,size,degree,color,buffer#  |
| <b>Description</b> | B: Draw a line meter needle to buffer and copy the buffer data to screen.<br>b: Draw a line meter needle to buffer and <b>not</b> copy the buffer data to screen.  |
| <b>Parameters</b>  | <ul style="list-style-type: none"><li>• x_center: x coordinate of needle center of rotation</li><li>• y_center: y coordinate of needle center of rotation</li><li>• radius0: needle length</li><li>• radius1: needle end length</li><li>• size: line number. 1 - 2</li><li>• degree: degree</li><li>• color: color parameter. Valid values: 0 - 1</li><li>• buffer# buffer number parameter. Valid values: 0 - 5</li></ul> |
| <b>Example</b>     | Create a new file and write text to the file.<br><b>PB,128,20,100,10,3,90,1,0</b>  |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)  |

## Extension Command E: (Execute batch command)

|                    |  |
|--------------------|--|
| <b>Prototype</b>   | S  |
| <b>Description</b> | This is Execute Batch Command. User can easy and fast to send more commands to the module at one time. |
| <b>Parameters</b>  | S = Start, E = End   |
| <b>Example</b>     | <b>S</b><br><b>AC,0,1</b><br><b>P2,128,20,100,10,3,90,1,0</b><br><b>.....</b><br><b>E</b>              |
| <b>Notes</b>       | Every command must have an end symbol (0x0D + 0x0A)  |

**READ THE FOLLOWING TERMS AND CONDITIONS CAREFULLY**

**LIABILITY WARNING**

This device should be used only for experimental purposes. It has NOT gone through extensive testing and it could erase or corrupt some or all data on media cards that are inside the device. You assume to take your own risk when you purchase this device, and release the responsibility and liability from the manufacturer with no harm.

**REGULATORY WARNING**

This device is intended solely for experimental purposes; it is not in finished product form and is NOT FCC approved. If you wish to install these modules into nonexperimental final finished products, you will be responsible to have the modules approved by the FCC at your own cost.
