

Virtual Server

You can configure the Broadband router as a Virtual Server so that remote users accessing services such as the Web or FTP at your local site via Public IP Addresses can be automatically redirected to local servers configured with Private IP Addresses. In other words, depending on the requested service (TCP/UDP) port number, the Broadband router redirects the external service request to the appropriate internal server (located at one of your LAN's Private IP Address).

	Private IP	Private Port	Type	Public Port
1.	192.168.2. <input type="text" value="114"/>	<input type="text" value="80"/>	<input checked="" type="radio"/> TCP <input type="radio"/> UDP	<input type="text" value="80"/>
