

Learn How to Use LCD and GPS Modules

This week, Joe Grand brings his expertise to Weekend Projects for the Awesome Electronics Workshop. This week you'll learn how to use LCD and GPS modules. Both are simple modules that you can integrate into your own electronics projects. In the PDF, you can see the schematics and you can download a zip file with all the sample code we used in this podcast to re-create these projects at http://cachefly.oreilly.com/make/wp_lcdgps.zip

To start off, we hook up the LCD module and show you how easy it is to send text to it! Then we hook up a GPS and run a program that reads the NMEA data off of it. Then we combined the two together and went geocaching!

This is an easy project for those wanting to experiment with new electronic components!

Learn how you can get 32-bit performance with 8-bit simplicity using Microchip's broad portfolio of 16-bit PIC[®] microcontrollers and dsPIC[®] digital signal controllers.

Register today for a half-day seminar near you.

This seminar shows you how the PIC24 and dsPIC33 devices can enable your next design and covers:

- An introduction to the key architectural and peripheral features of Microchip's 16-bit devices
- Software libraries and development tools that reduce your development time and get your product to market quickly
- How to combine peripheral features, architectural features and software libraries to create new designs more easily
- Microchip's three product families, PIC24F, PIC24H and dsPIC33, with detailed application case studies
- Training resources Microchip offers to help you get started solving your next application requirement

Who Should Attend:

Embedded systems designers not familiar with Microchip's 16-bit PIC24 and dsPIC DSC offerings who need to reduce their time to market and require 16/32-bit performance microcontrollers with well supported, easy-to-use powerful development tools.

Discounted Tools & Boards include:

MPLAB[®] ICD 2 Limited Edition - An all-in-one in circuit debugger/programmer solution the MPLAB ICD 2 Limited Edition is a low cost, real-time debugger and programmer for our entire 16-bit portfolio.

16-bit 28-Pin Starter Development Board - The 16-bit, 28-pin Starter Development Board serves as a development kit and evaluation tool for Microchip's 16-bit microcontrollers and digital signal controllers.

Also included in the standard package are:

- **Free** software libraries
- **Free** MPLAB IDE Integrated Development Environment

Cost:

\$25 includes seminar attendance

\$99 includes seminar attendance, MPLAB ICD2

Limited Edition and 16-bit 28 pin Starter Development Board

To register today for a 16-bit seminar near you, visit our registration site at www.microchip.com/seminars.
